## Features covered:

1: Grid-Based Game Board: The game board is displayed as a grid where players will place thier ships and track their attacks. A typical grid size is 10x10.

```
15 void initializeBoards() {
16     for (i = 0; i < BOARD_SIZE; i++) {
17         for (j = 0; j < BOARD_SIZE; j++) {
18             userBoard[i][j] = ' ';
19             computerBoard[i][j] = ' ';
20         }
21     }
22 }
23
24 void printBoards() {
25     printf("Your Board:\n");
26     for (i = 0; i < BOARD_SIZE; i++) {
27         if (i == 0) {
28             printf(" ");
29         } else {
30             printf(" ");
31         }
32         printf("%d", i);
33     }
34     printf("\n");
35     for (i = 0; i < BOARD_SIZE; i++) {
36         printf("%d ", i);
37         for (j = 0; j < BOARD_SIZE; j++) {
38             printf("%c ", userBoard[i][j]);
39         }
40         printf("\n");
41     }
42
43     printf("\nComputer's Board:\n");
44     for (i = 0; i < BOARD_SIZE; i++) {
45         if (i == 0) {
46             printf(" ");
47         } else {
48             printf(" ");
49         }
50         printf("%d", i);
51     }
52     printf("\n");
53     for (i = 0; i < BOARD_SIZE; i++) {
54         printf("%d ", i);
55         for (j = 0; j < BOARD_SIZE; j++) {
56             printf("%c ", computerBoard[i][j]);
57         }
58         printf("\n");
59     }
60 }
```

```
Your Board:
  0 1 2 3 4 5 6 7 8 9
0   S   S   S   S   S   S
1   S   S   S   S   S   S
2   S   S   S   S   S   S

8   S   S   S   S   S   S
9   S   S   S   S   S   S
```

2: Ship Placement: Players can place their ships on the game board manually or randomly.

```

62 void placeShips_randomly(char board[BOARD_SIZE][BOARD_SIZE]) {
63     int shipSize = SHIP_SIZE;
64     while (shipSize > 0) {
65         int x = rand() % BOARD_SIZE;
66         int y = rand() % BOARD_SIZE;
67         if (board[x][y] == ' ') {
68             board[x][y] = 'S';
69             shipSize--;
70         }
71     }
72 }

74 int isValidTarget(int x, int y) {
75     return x >= 0 && x < BOARD_SIZE && y >= 0 && y < BOARD_SIZE;
76 }
77
78 void placeShips_manually(char board[BOARD_SIZE][BOARD_SIZE]) {
79     int x, y, shipSize = SHIP_SIZE;
80     for (i = 0; i < shipSize; i++) {
81         printf("Enter the location (x y) of ship %d: ", i + 1);
82         scanf("%d %d", &x, &y);
83
84         if (isValidTarget(x, y) && board[x][y] == ' ') {
85             board[x][y] = 'S';
86         } else {
87             printf("Incorrect input! Try again.\n");
88             i--;
89         }
90     }
91 }

```

```
